AURAL HABILITATION OF CHILDREN WITH HEARING IMPAIRMENTS AUD 7326

Summer 2016

Mon and Wed 8:30 to 12 starting June 1st

June 24-26 Camp CHAT, Briarwood Retreat Center, Argyle, TX

Instructor:

Linda Thibodeau, Ph.D.

Audiologist, CCC/Speech-Language Pathologist, CCC

Office: AHRC J210, UTD-Green 4.820 Phone: 214-905-3108 Cell: 972-898-3463

Email: thib@utdallas.edu

Web Site: http://www.utdallas.edu/~thib/

Office Hours (in person or via email): Mon, Wed 12-1 and by appointment

COURSE TOPICS: To understand and apply knowledge about the following topics, as they relate to hearing-impaired children:

- 1) interpretation of an audiogram re: aural habilitation needs
- 2) speech acoustics in relation to hearing loss and speech development
- 3) individual and group amplification including types, set-up and maintenance, and troubleshooting
- 4) measurement of room acoustics and effects on speech perception
- 5) assessment and intervention for auditory training
- 6) integration of speech/language/academics with auditory training
- 7) educational considerations for mainstreamed children
- 8) psychosocial issues in relation to parents and children
- 9) management of special populations (unilateral loss, cochlear implant)

COURSE OBJECTIVES: After completing the course, students should be able to:

- 1) given three audiograms, determine the aural habilitation needs for infants, toddlers, and schoolaged children,
- develop a table to compare speech features across frequencies and the impact of three types of hearing loss,
- 3) create a spreadsheet of amplification types, setup, maintenance, and troubleshooting for children in.
- 4) given acoustic features of a room, calculate the reverberation and describe three possible effects on speech recognition.
- 5) given a case study, determine the appropriate auditory training assessment and intervention and outline the steps required to implement the program.

ASHA STANDARDS ADDRESSED IN THIS CLASS:

- A6. Phonologic, morphologic, syntactic, and pragmatic aspects of human communication associated with hearing impairment
- A15. Assistive technology
- A17. American Sign Language and other visual communication systems
- A20. Health care and educational delivery systems
- A27. Use of interpreters and translators for both spoken and visual communication
- B4. Screen individuals for speech and language impairments and other factors affecting communication function using clinically appropriate, culturally sensitive, and age- and site-specific screening measures

Page 2

- C2. Assessing individuals with suspected disorders of hearing, communication, balance, and related systems
- C3. Evaluating information from appropriate sources and obtaining a case history to facilitate assessment planning
- C5. Conducting and interpreting behavioral and/or electrophysiologic methods to assess hearing thresholds and auditory neural function
- C9. Evaluating functional use of hearing
- D2. Development of a culturally appropriate, audiologic rehabilitative management plan that when appropriate include the following:
 - a. Evaluation, selection, verification, validation, and dispensing of hearing aids, sensory aids, hearing assistive devices, alerting systems, and captioning devices, and educating the consumer and family/caregivers in the use of and adjustment to such technology
 - b. Determination of candidacy of persons with hearing loss for cochlear implants and other implantable sensory devices and provision of fitting, mapping, and audiologic rehabilitation to optimize device use
 - c. Counseling relating to psychosocial aspects of hearing loss and other auditory dysfunction, and processes to enhance communication competence
 - d. Provision of comprehensive audiologic treatment for persons with hearing loss or other auditory dysfunction, including but not exclusive to communication strategies, auditory training, speech reading, and visual communication systems
- D5. Provision of treatment services for infants and children with hearing loss; collaboration/consultation with early interventionists, school based professionals, and other service providers regarding development of intervention plans (i.e., individualized education programs and/or individualized family service plans)
- F1. Measuring functional outcomes, consumer satisfaction, efficacy, effectiveness, and efficiency of practices and programs to maintain and improve the quality of audiologic services
- F6. Maintaining or establishing links with external programs, including but not limited to education programs, government programs, and philanthropic agencies

COURSE REQUIREMENTS:

- 1) Prerequisites
 - a) Basic understanding of individual amplification systems.
 - b) Knowledge of differential diagnostic audiological evaluation.
 - c) Graduate standing.

2) Readings-

TEXTBOOKS:

a) Pediatric Audiology: Diagnosis, Technology and Management, Madell, Jane and Flexer, Carol Eds.

(2008) New York: Thieme.

b) Alone in the Mainstream by Gina Oliva. (2004) Washington DC; Gallaudet University Press. ISBN 978-1-56368- 300-8

OTHER:

b) AAA Clinical Practice Guidelines: Remote Microphone Hearing Assistance Technologies for Children

and Youth Birth-21 Years (2008). www.audiologyonline.com

c) AAA Clinical Practice Guidelines: Remote Microphone Hearing Assistance Technologies for Children

and Youth Birth-21 Years, Supplement A. (2008). www.audiologyonline.com

- d) Articles/Chapters on AUD7326 in Dropbox
- 3) Extensions, make-up exams, and incompletes will be given only in **extenuating** circumstances. They must

be requested in writing prior to the due dates.

4) Evaluation Procedure-Requirements for each letter grade are indicated below:

Requirements for a C: Final paper (see below)

Requirements for a B: Final paper (see below) Requirements for an A: Final paper (see below)

Explanations of Requirements

Final Paper

You will submit a comprehensive Final Paper to reflect on what you learned in this course that justifies you receiving a final grade of A, B, or C. Due July 22nd to elearning.

Required AH Experiences-to be shared with an assigned partner and shared in class

Specific instructions for each experience will be provided and you will provide feedback to each other on each experience.

- 1) Audiological Case- You will write a summary of audiologic results with respect to the unaided and aided long-term speech spectrum and make two recommendations regarding further testing.
- 2) FM Fitting Case- You will write an FM recommendation that includes the pertinent background information regarding current amplification use, school factors, and proposed FM evaluation.
- 3) FM Evaluations-You will conduct electroacoustic evaluations of four sets of FM equipment according to AAA guidelines. A one page copy of the electroacoustic evaluations and a summary statement of the adequate functioning (or not) is to be submitted for each one.
- 4) Auditory Training Program-You will develop an auditory training program with a partner for a child with hearing loss. You will develop at least twenty stimuli for auditory training (20 trials) to run on a PC via a ppt file.
- 5) Transition Workshop-You will participate in the development/offering of a workshop for teachers, administrators, and counselors on the needs of teens transitioning to college.

Required AH Experience-to be completed individually - AH Activity for Teens

You will create an auditory-based activity in which you apply the course material with teen populations to teach an audiologic/social/speech perception/technology issue. The activity will be conducted during teen camp, June 24-26.

UT Dallas Syllabus Policies and Procedures

The information contained in the following link constitutes the University's policies and procedures segment of the course syllabus.

Please go to http://go.utdallas.edu/syllabus-policies for these policies.

The descriptions and timelines contained in this syllabus are subject to change at the discretion of the Professor.

STUDENT INFORMATION

Name:	Phone:
Major: ₋	# of graduate hours to date:
Expect	ted Semester of Graduation:
Course	es:
	Have you had an undergraduate course aural habilitation that included information on amplification?
Practio	cum:
Have y	ou had any experience with hearing-impaired children? Briefly describe.
<u>Genera</u>	<u>al:</u>
	Are you working in addition to taking classes? If so, where and how many hours per week?
	Where was the majority of your lower-division coursework completed?
	Have you worked with or known any hearing-impaired persons? Briefly describe.
	What do you particularly hope to learn in this course about hearing-impaired children?
